IDENTIFIERS	*Illinois

ABSTRACT

This document reports a follow-up study of 10,504 students who transferred in fall 1973 from Illinois community colleges to Illinois senior institutions, in order to identify patterns of mobility by both sending community colleges and receiving senior institutions, and to study the pre- and post-transfer characteristics and achievement of these students. Data are compared to the findings of a similar study of the transfer population of fall 1967. The performance of the transfer students was measured by three criteria: persistence of the students at the senior college, academic status, and gradepoint average (GPA). The study shows that the large majority of transfers continued to pursue the baccalaureate degree, and 78% of those whose academic status was known were in clear or good standing. At the end of the spring 1974 term, the mean GPA of transfer students was 2.65, only .15 lower than the mean pre-transfer GPA. (NHM)

PREFACE

The need for follow-up studies of community college transfer students is recognized by all community college educators and is mandated in the Illinois Public Community College Act as well as in the policies of the Illinois Community College Board. Many community colleges in Illinois have conducted follow-up studies of their transfer students for a number of years. The desirability of having statewide norms for comparison purposes was often indicated in these studies. In 1972, through the cooperative efforts of the Senior College Coordinators Association and the Community College Coordinators Association, the ICCB agreed to undertake a statewide study of community college transfer students at senior institutions in Illinois. Having the backing of both the junior and senior college coordinators, 24 senior colleges in Illinois agreed to furnish information on students transfering to them for the Fall, 1973 term from the various public community colleges for the follow-up study. Although uncertainties about the Buckley Amendment in 1974 made it necessary to change the data from individual to group basis, the majority of these senior institutions continued to furnish data on the transfer students making this statewide effort possible.

This study was designed to encourage local follow-up studies of transfer students at each community college as well as to develop a statewide follow-up study. For this reason, the progress data on the transfer students was sent from the senior institutions to the local community colleges for their use and then forwarded to the Illinois Community College Board to be used in the statewide analysis. Hence, we appreciate the efforts of both the senior college personnel and the community college personnel who provided the data for this statewide analysis.

INTRODUCTION

Since the preparation of students to transfer to senior institutions is one of the primary purposes of a community college, a study of the number of transfer students, as well as of their senior college performance, is an important measure of the relative achievement of this purpose. This current study is to some extent a replication of the 1967 Illinois transfer study, "Performance of Transfer Students Within Illinois Institutions of Higher Education," published by the Council on Articulation of the Illinois Conference on Higher Education in November 1971. The primary difference between these two studies is the population followed. In the 1967 study students transferring from 2-year institutions to 4-year institutions as well as "reverse" transfers were studied. In the current study only students transferring during the Fall term 1973 from Illinois public community colleges to Illinois senior institutions were included.

PURPOSES

All Illinois public community colleges and 24 Illinois private and public senior institutions are currently participating in this study. This level of participation should yield information on at least 80 per cent of all Illinois community college students who transferred in Fall 1973 to Illinois senior institutions. The purposes of this study are as follows:

(1) To determine the magnitude of Illinois community college transfers to Illinois senior institutions.

(2) To determine the mobility patterns, by sending community colleges and by receiving senior institutions.

(3) To study the pre-transfer characteristics of these students

(4) To study the achievement and retention of these students after transfer.

LIMITATIONS

This statewide study depended upon data furnished by the senior institutions to the public community colleges and then by the community colleges furnishing a summary of this data back to the Illinois Community College Board staff for statewide analysis. Hence, the study is limited to the accuracy of the data reported by all institutions involved. Another limitation of the study is that some of the community colleges as well as some of the senior institutions had very small numbers of Fall, 1973 transfer students included in the study and hence, the reliability of the inference is limited. Another difficulty with the study occurred when several of the senior institutions were unable to continue providing post-transfer data on the transfer students to the community colleges. This meant that the progress of the students at some senior institutions could not be monitored each year. We are still hopeful that this progress data can be obtained before the study concludes. Since all of the Fall, 1973 transfer students were identified by name and Social Security number, these progress reports are still possible.

PRELIMINARY FINDINGS

Phase I of the study was concerned with identifying the Fall 1973 transfer students at each participating senior college and obtaining the necessary data to analyze the first three purposes of the study. Each senior institution furnished a list of Fall 1973 transfer students to each sending public community college. The community colleges then provided pre-transfer data on these students and the ICCB staff compiled and analyzed the results.[1]

1. This information was reported in November, 1974 in the publication entitled, "A Follow-Up Study of Fall, 1973 Transfer Students from Illinois Public Community Colleges: Phase I Preliminary Report".

Tables I through IV give information on the number and mobility of Fall 1973 community college transfer students. A study of these tables indicates that in the Fall term 1973, Illinois senior institutions received 10,504 transfer students from Illinois public community colleges (Table I). This number represents about a 70 per cent increase in transfer students over the Fall, 1967 total. Even though affected to some extent by the number of private institutions participating in this study, the per cent of transfers attending public Illinois senior institutions increased from 77 per cent in 1967 to 87 per cent in 1973 while the per cent attending private institutions dropped from 23% to 13%. The approximate 70 per cent increase in the number of transfer students is substantiated by Table II, which compares 1967 and 1973 transfers by Illinois community colleges which participated in both studies. Four Illinois senior institutions are receiving about one-half of all community college transfers (Table III).

Loyola University	172	1.7
Lewis University	169	1.6
Bradley University	161	1.5
Elmhurst College	89	.9
Illinois Institute of Technology	60	.6
College of St. Francis	57	.5
Rosary College	52	.5
Blackburn College	14	.1
MacMurray College	8	.1
North Park College	4	.1
TOTAL	10,504	100.01

*Data received only from 24 senior institutions which are estimated to account for over 90% of the community college transfers.

Table IV shows the mobility matrix of community college transfer students to the 24 participating senior institutions in Illinois. The table shows the number of community college students from each community college attending each of the 24 senior institutions. Also shown are the total number of Fall 1973 transfer students in each of the public community colleges and each of the 24 participating senior institutions. The number of transfer students at each community college range from 21 at Richland to 2,452 at Chicago City Colleges which includes seven campuses.

Northern Illinois University enrolled the largest number of community college transfer students, 1860 (17.7% of the total); Southern Illinois University (Carbondale) had the second highest number 1284 (12.2% of the total); followed closely by Illinois State University with 1093 (10.4% of the total) and University of Illinois (Chicago Circle) with 1,037 (9.9% of the total).

It must be pointed out that the Urban Skills Center campus of Chicago City Colleges does not provide baccalaureate instruction, and hence, does not have transfer students. John Wood Community College was not in existence in the Fall of 1973 when this study started. Hence, all public community colleges that provide baccalaureate instruction were included in this statewide study.

PRE-TRANSFER CHARACTERISTICS

Phase I of the transfer study involved obtaining data about the pre-transfer characteristics of the Fall, 1973 community college transfer students. Information about the pre-transfer academic achievements of students is important because it is heavily related to performance of students after transfer at the senior institution.

1. Tables V and VI give selected pre-transfer characteristics indicating that six out of every ten transfer students transfer without an associate degree.

2. Tables V and VI show that two out of every ten students transfer as freshmen.

3. Tables V and VI show that in terms of ability as measured by the mean composite ACT scores, these transfer students possess ability more comparable to the native senior college student than the typical community college student.

The pre-transfer gradepoint average of the Illinois public community college transfer students indicates that these transfer students possess good ability and community college achievement (about a B grade average).

Table VII on page 10 shows the detailed pre-transfer academic level of the students at each community college at the time of transfer. This table shows that a large number of community college students transferred after acquiring a relatively low number of semester hours at the community colleges. As pointed out earlier, about 20% transfer as freshmen. Another interesting factor is that 430 of the transfer students (4.2%) received associate and applied science degrees which are normally considered to be degrees in the occupational/career area rather than baccalaureate degrees. In addition, 107 transfer students (1%) received other associate degrees which are presumably degrees in general studies or liberal studies.

TABLE VI

Academic Ability Measures of Fall 1973 Transfer Students

	1967	1973
ACT Composite Mean	19.5 (N=2166)	20.0 (N=5469)
Pre-Transfer GPA (4-point scale)	--	2.8 (N=9986)

ACT is the American College Testing which has a range of scores from 0 to 36 with a mean of around 18.

GPA is the gradepoint average compiled in all course work at the community college prior to transferring to the senior institution.

POST-TRANSFER DATA BY COMMUNITY COLLEGE

Table VIII shows the post-transfer follow-up data for the Fall, 1973 transfer students by public community college. The table shows the academic status of the students at the close of the Spring, 1974 term at the senior institution and the gradepoint average at the end of the Spring, 1974 term. Also shown are the number of students in the transfer study and the number of students for which the status is known.

An analysis of the academic status of the Fall, 1973 transfer students shows that of those students whose status is known, 78.0% were on clear or good standing with 10.0% being on academic probation, 3.1% dismissed, and 7.7% had withdrawn. This compares very favorably to the status of native students reported by several of the senior institutions that are doing an analysis comparing transfer students with their own native students. It must be pointed out that the reason for the large number of students whose status is unknown is due to the fact that several of the senior institutions did not report the progress of the transfer students to the community colleges for this year.

The number of graduates reported from Fall 1973 transfers at the end of the Spring 1974 Term by the senior institutions was 77. In checking this data, it appears that some of the transfer students had accumulated a large number of hours prior to attending the community college. Hence, graduation within a year after transfer from the community college, was possible. In analyzing the mean gradepoint average of the transfer students by community college, the differences seem to be very, very slight especially when the pre-transfer achievement of the transfer students is considered. Other factors which will cause the gradepoint average to vary are the senior institution that the transfer students attend and the particular major which the transfer students pursue. The differences in GPA of students from the same community college attending different senior colleges were much larger than the differences between the GPA of students from different community colleges.

SPRING 1974

POST TRANSFER DATA FOR COMMUNITY COLLEGE

STUDENTS TRANSFERRING TO ILLINOIS SENIOR INSTITUTIONS

DURING THE FALL 1973 TERM

POST-TRANSFER DATA BY SENIOR INSTITUTION

Table IX shows the post-transfer follow-up data by participating senior institution. The same academic status categories and the cummulative grade-point average at the end of the Spring, 1974 term are shown in this table as in Table VIII. The gradepoint averages of the transfer students among these institutions vary more than among the community colleges. Of course, there is a great deal of difference among the types of institutions represented and among the type of majors that these institutions offer. Also, in comparing the grade averages of these institutions we must be aware of the fact that a few high or low grade averages will greatly effect the mean gradepoint average if only a few transfer students are attending that particular institution. In this table, we have purposefully omitted the gradepoint average for institutions having less than five transfer students for whom a grade-point average was known. Another factor to consider is that a number of these senior institutions give a student an option of either receiving grades or taking the pass-fail option in which no gradepoint average is calculated. In this situation, the gradepoint average is only given to those students who desire it, and hence, would be expected to be higher than if everyone received grades. It must be pointed out that all gradepoint averages were converted to the four point scale with 4.0 equaling A; 3.0 equaling B; 2.0 equaling C, 1.0 equaling D and F equaling 0.

*To safeguard privacy of individuals, the ICCB has a policy for not reporting data which is for a group less than five to preclude the identification of specific individuals. Hence, the GPA is omitted for these colleges.

COMPARISON OF PRE-TRANSFER DATA WITH POST-TRANSFER DATA

Table X below shows a comparison of the results for the Illinois Public Community College transfer students in this study with transfer students in a national study conducted by Knoell and Medsker.[1] This table shows that the community college transfer students performed about the same as students in the national study. The drop in gradepoint average for the students in the national study was from 2.57 to 2.42 while the drop in GPA for the transfer students in this study was from 2.80 to 2.65. This initial drop in GPA after transfer is a common occurrence known as "transfer shock" and is due to transfer students not being adjusted to their new institution. Usually, the GPA starts back up after the first few terms at the senior college and approaches nearly the same level as the pre-transfer GPA by the senior year. In comparing the results of the transfer students for the various community colleges, it is important to look at the ACT score of the transfer students as well as their pre-transfer GPA because these two factors are very good indicators of the performance of transfer students at senior institutions. As pointed out earlier, however, all of the other relevant factors should also be considered such as the particular senior institution that a majority of these students attend and the particular majors in which they are enrolled.

TABLE X

COMPARISON OF THE PERFORMANCE OF ILLINOIS COMMUNITY COLLEGE TRANSFER STUDENTS WITH TRANSFER STUDENTS IN NATIONAL STUDY

	Pre-Transfer	Post-Transfer	
	Community College GPA	1st Term GPA	2nd Term GPA
Illinois Public Community College Transfer Student in this Study	2.80	N.A.	2.65
Transfer Students in National Study (1965)*	2.57	2.27	2.42

*(1) Knoell, Dorthy M. and Medsker, Leland L., From Junior to Senior College: A National Study of the Transfer Student. American Council on Education, Washington, D. C., 1965.

Table XI on page 18, shows the comparison of pre-transfer data with the post-transfer data for the Fall, 1973 transfer students by each community college. This table shows that generally the average GPA of the transfer students dropped slightly at the senior institution. The average drop in GPA for all Fall, 1973 transfer students was from 2.8 to 2.6 (rounded to the nearest tenth).

SUMMARY

Although this statewide transfer study is only in its second phase with the post-transfer data for the second year at the senior institutions still to be submitted and analyzed, the data indicates that Illinois public community colleges are performing the transfer function rather well because of the performance of its transfer students. The three measures of progress which were analyzed were the persistence of the students at the senior college, their academic status, and their achievement as measured by gradepoint average. The study showed that the large majority of the students who transferred were still actively pursuing the baccalaureate degree, and 78% of those whose academic status was known were on clear or good standing. The gradepoint average of these transfer students at the end of the Spring 1974 term was a very respectable 2.65 which is only .15 lower than the pre-transfer GPA.

The next part of this study (Phase III) will analyze the progress of the transfer student during the second year at the senior colleges. The data for this part of the study is being collected at this time. It is anticipated that this data will show the number of transfer students who have completed their baccalaureate degrees within two years after transfer. Since many students follow the part-time pattern of attendance at the four-year colleges and universities, it will be necessary to continue this study for several additional years to determine how many of these students reach their goals of completing a bachelor's degree.

We are very hopeful that all senior institutions will be able to continue to furnish progress data on the transfer students so that this study can be

COMPARISON OF PRE-TRANSFER GPA WITH SPRING 1974 POST-TRANSFER GPA BY COMMUNITY COLLEGE

* The # of Students with only Known Status.

completed. In addition, we hope that the few senior institutions who have not been able to report the progress of the transfer students for Part II of the study will make every effort to report this data to the community colleges so that this information can be included in the final report of this follow-up study.
